**A dust free training environment and stable riding surface are essential for training your horses. Q-line®**

Dust development is a well known problem in riding arenas. Low humidity and intensive usage of the soil leads to dust and fine sand blowing up and through the arena. Training under these circumstances is not pleasant nor very healthy for horse and rider.

To counter this dust forming Q-line® has developed a number of irrigation systems. These system create an equal soil humidity in your arena. You never again have to worry about unhealthy sand and dust. The system can be set to operate automatically or can be controlled manually so that at any time you and your horse have the perfect foundation to ride on.

An equally sprayed foundation has a significantly longer life span and make it a better bottom to ride on. Q-line® utilizes special nozzles that create a mist that equally spreads over the arena.

The Q-line® irrigation systems are designed and build according to the highest norms and latest technological standards, where the safety and comfort for you and your horse come first.

Your arena, durable and free of dust with Q-line®

### ***Unique benefits***

#### **Safety:**

The Q-line® horse irrigation systems water your riding surface equally so the foundation is the same consistency over the entire arena. This minimizes the chance your horse will fall.

#### **Durability:**

High quality materials and a solid construction make Q-line® irrigation systems a durable investment.

#### **External characteristics:**

To divide the sprinklers equal you will get a optimal irrigation

#### **Maintenance:**

The Q-line® irrigation systems are solid constructions and requires little maintenance. Some systems even automatically drained after use so they can't be damage when it freezes in the winter.

#### **Quality mark:**
