Omega Coupling

Omega Element E20

Omega Element E20 / Article no. 11-1-00-00025

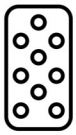

An element consists of two parts, making it possible to easily replace it without changing the position of the hubs on the axle. Although the Omega coupling is not specially designed for this, the element will act as a torque limiter. When the maximum torque is exceeded, the element will function as a fuse in case of blockage or overload.

- Highly elastic
- Easy to replace
