The Q-Line AquaTrainer Standard is designed as a compact and clear system for controlled water exercise. It provides a reliable basic solution for stables that want to integrate aqua training into their daily routines, with the option to add extra comfort and safety features.

## Features of the AquaTrainer Standard

### Calm, structured movement in water

With adjustable water height and treadmill speed, the system creates a stable environment in which horses can move calmly. Many users value water training for its even movement and the controlled character of the sessions.

### Easy to integrate into stable routines

The AquaTrainer is suitable as part of various daily routines in the stable. The adjustable belt, variable water height and clear controls make it possible to tailor each session to the type of horse and the desired rhythm within the training programme.

### Compact system with quick preparation

The water level reaches 60 cm in approximately 2.5 minutes. This keeps preparation time short and allows the system to be used efficiently throughout the day.

## Ease of use and design

### Simple operation

The touchscreen provides a clear overview and allows direct adjustment of water level, speed, incline and time. Thanks to the clear layout, operation remains intuitive.

### Transparent doors and safety glass

Transparent panels on both sides ensure that the horse remains clearly visible throughout the entire session. The doors offer wide access and close securely and safely.

### Flexible breast bar

The breast bar moves with the horse and provides enough space for a natural walking pattern. It can be released quickly if needed.

## Features

# Features of the AquaTrainer Standard

### Standard Equipment:

- **Built-In System:** Designed for in-ground installation to save space and enhance usability.
- **Compact Design:** Includes a 600-liter water tank, perfect for effective aqua training.
- **Reliable Filtration:** Pump station with two 200-micron pre-filters and a capacity of 950 liters per minute for optimal water circulation and clarity.
- **Smart Operation:** Remote control via smartphone for maximum flexibility and convenience.
- **Debris Management:** Includes a set of two filters to prevent debris buildup in the water.

### Optional Extras:

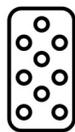

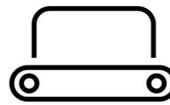

- **Safety Bumper:** Extra security at the rear door, ideal for new or nervous horses.
- **Installation and Transport:** Professional service for safe delivery and proper installation.

### Installation Requirements:

- A customer-prepared infrastructure, including:
  - Water supply and drainage lines.
  - A floor opening to accommodate the treadmill.
  - Electrical outlets for connecting the AquaTrainer.

### Summary:

The AquaTrainer Standard offers a basic solution for aqua training with reliable and straightforward functionalities. Ideal for users seeking a compact and effective system, with optional upgrades for added safety and convenience.
