The Q-Line AquaTrainer Basic is designed as a compact and clear system for controlled movement in water. It offers a practical basic solution for stables that want to include water training in their daily routines, with optional extensions for added comfort and safety.

Features of the AquaTrainer Basic

Calm and structured aqua movement

With adjustable water height and speed, the system creates a stable and predictable environment in which horses can move calmly. Many users appreciate the even stepping activity that water exercise provides.

Easy to integrate into daily routines

The AquaTrainer Basic fits well within a wide range of stable programmes. Thanks to the variable water settings, adjustable incline and user-friendly controls, each session can be easily adapted to the type of horse and the desired rhythm on the yard.

Compact and efficient in use

The water reaches approximately 60 cm in about 2.5 minutes, keeping preparation quick and simple and allowing the system to be used efficiently throughout the day.

Ease of use and design

Simple operation

The touchscreen control panel provides a direct overview of water level, speed, incline and time. The interface is intuitive and clearly structured.

Transparent doors and safety glass

Transparent panels on both sides provide optimal visibility during the session. The doors offer wide access and close securely and safely.

Flexible breast bar

The breast bar moves with the horse and provides enough space for a natural walking pattern. It can be released quickly when needed.

Features

Features of the AquaTrainer Basic

Standard Equipment:

- **Above-Ground Installation:** Designed for easy placement without major structural adjustments.
- **Access Ramps:** Easy-to-use ramps for smooth entry and exit from the water trainer.
- **Compact Design:** Includes a 600-liter water tank, perfect for effective aqua training.
- **Reliable Filtration:** Pump station with two 200-micron pre-filters and a capacity of 950 liters per minute for optimal water circulation and clarity.
- **Smart Operation:** Remote control via smartphone for convenience and flexibility.
- **Debris Management:** Includes a set of two filters to prevent debris buildup in the water.

Optional Extras:

- **Safety Bumper:** Increased safety for horses during use.
- **Installation and Transport:** Professional support for safe delivery and proper installation.

Installation Requirements:

A customer-prepared infrastructure, including:

- Water supply and drainage lines.
- Electrical outlets for connecting the AquaTrainer.

Summary:

The AquaTrainer Basic offers a practical solution for aqua training with simple above-ground installation. Ideal for users looking for an efficient system without the need for major infrastructure adjustments. Optional upgrades provide additional safety and convenience.

Specifications

Connection	400V 3F+N+E 50/60Hz
Fuse with	32A
Ampere	22,7A
Power usage	15,7 kW
Basic material	Stainless Steel
Secure	IR sensor
Length	Inner 380 cm / Outer 492 cm
Width	Inner 100 cm / Outer 188 cm
Height	Inner 154 cm / Outer 192 cm
Weight	1780 Kg
nr of horses	1
Speed	10 km/h
Suited for	Uphill 10%
Suplied as standard	Pump station, 600-liter tank, smartphone control, 2 diapers.
Optional	Backwash tank for saltwater, safety bumper
Other	Ramp for front and rear
