SAFETY WALL

This model is highly suitable for the private stable with its own horses. You can train your horses with peace of mind. This walker provides your horse with daily exercise, simple yet effective. The standard step control box is equipped with an internally adjustable timer for changing direction. The speed can be easily adjusted with the waterproof speed controller.

As a horse owner, it's important to keep your horse moving and training regularly. A horse walker can be a useful tool for this purpose. A horse walker is a rotating machine that keeps horses in motion while they remain in one place.

Regular Exercise

One of the main advantages of using a horse walker is that the horse gets regular exercise. This is especially useful if your horse is injured or temporarily unable to ride. Using a horse walker keeps the horse moving and helps it stay in good condition. Moreover, the horse can move safely without the risk of injuries that can occur during riding.

Muscle Building and Maintenance

Another benefit of using a horse walker is that it can assist in building and maintaining the horse's muscles. The constant movement of the horse walker is a good way to train and strengthen the horse's muscles. The variable speed of the horse walker allows different muscle groups to be trained, helping the horse maintain balance and become stronger.

Mental Stimulation

In addition to physical benefits, using a horse walker can also provide mental stimulation for the horse. Walking in circles can become boring for a horse over time, but by alternating speeds and directions, the horse walker can become a fun and challenging experience for the horse.

Time Savings

A horse walker can also be a good time-saving solution for busy horse owners. By placing the horse in the walker, the owner can focus on other tasks without worrying about moving the horse.

Stress Reduction

Horses are naturally prey animals and can easily become stressed in unfamiliar environments or situations. Using a horse walker in a familiar environment can help the horse feel safe and reduce stress.

Conclusion

A horse walker can be a useful tool for horse owners to provide their horses with regular exercise, muscle building, and mental stimulation. It can also save time and reduce stress for both the horse and the owner.

- 🖊 Easy to install
- Electric shock preparation
- Low maintenance
- Easy to operate
- Mesh drift fences

SAFETY WALL

Features

Safety:

The Q-line® horse exercisers are specially designed to be as safe as they can be and are equipped with a direct drive with elastic coupling, lightweight mesh fences and electrical safety settings. All moving parts are protected from contact.

Durability:

By making use of high quality industrial material we can ensure a long lifespan. The technologically advanced design makes the Q-line® horse exerciser rotate smooth- and quietly. The minimal friction put less strain on the driving engine so that little energy is used.

External characteristics:

In the designing Q-line® has strived to create a compact and minimalistic appearance. The push fences hang 2 meter high and are 1,97 meter wide and 1,22 high and are around protected with a plastic cover.

Maintenance:

The Q-line® exerciser is a solid construction and requires little maintenance. The technologically advanced design and choice in materials minimize corrosion so that maintenance is barely needed.

Quality mark:

All Q-Line® Horse exercisers conform to the machine code 2006/42/EG and are fit with the CE quality mark. The Q-line® walkers are certifiably approved according to the NEN 3140 and OSH directive en hereby conform to all European safety requirements.

Control:

The control box is equipped with an internally adjustable timer for direction change.

The speed is easy to set with the waterproof speed potentiometer.
