Mounty has developed an automatic mounting aid. This is a world first - one from which both horse and rider benefit in equal measure.

Mounting a horse in the usual way places the animal under considerable nervous and physical strain. No wonder, because a considerable stress is placed on the horse's back as its spine is pulled to the side. In the past, repeated efforts have been made to remedy this problem, but no solution has ever proved entirely satisfactory.

Now, however, Mounty has developed an automatic mounting aid. This is a world first - one from which both horse and rider benefit in equal measure. The Mounting Aid relieves the strain on the horse's back, prevents the saddle from being pulled askew, and spares the animal's nerves. It also makes mounting much easier for the rider - and its folds away automatically after it has been used. Professional riders more or less always use a mounting aid, for it is quite simply a part of good horsemanship

Features

- Relieves the strain on the horse's back
- Prevents saddles from being pulled askew
- Folds away gently and silently
- Ideal for sensitive horses
- Generously sized step-up board facilitates mounting
- Height of board freely adjustable
- Easy to install and use
- Fitted flush with any kick board and can also be fastened to floors
- No wearing parts, no maintenance, no power requirement
- Tested and recommended by the Deutsche Akademie des Pferdes (FN)

“A very great success with the mounting aid. Our disabled people appreciate the mounting aid because it gives them a very special sense of security. The mounting aid provides considerable relief for the horses, but also for people with disabilities here in the riding school. The mounting aid offers these people a sense of security.”

— Martina Regenber, instructor at a riding school with people with disabilities.
