Horse exerciser irrigation

No dust on the lunging arena

Lunging irrigation on 1 arm / Article no. 23-3-20-00011

The lunging arena irrigation keeps the lunging arena in the exerciser moist so that no dust is blown up when the horses walk in the arena. Irrigation also ensures a more stable soil.

The irrigation is connected to the irrigation system of the training exerciser and can be turned on and off by a 3-way tap, so that you can choose between the lunge circle or the track.

The sprinkler system is equipped with an automatic draining system which ensures that the water runs out of the pipe after each watering, so that it cannot freeze during periods of frost.

The spray tube is equipped with nozzles that atomize the water above the lunging arena, so that the soil is evenly moistened.

- No dust
- Stable riding surface
- Reliable

Q-LINE

SOLARIUM IRRIGATION TREADMILL SAFETY WALL WALKER

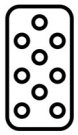

Features

The lunging arena irrigation is suitable for the USD exerciser.

For other brands, you may have to adjust something to get it right.
