Horse exerciser irrigation

No dust on the track

Track irrigation Basic / Article no. 23-3-10-00060

The hoof path irrigation keeps the walkway in the walker moist so that no dust is raised when the horses walk in the walker. Irrigation also ensures a more stable soil.

The high-quality bearing swivel under the walker is made to rotate constantly, unlike cheap "garden hose coupling solutions"

The sprinkler system is equipped with an automatic draining system which ensures that the water runs out of the pipe after every spraying so that it cannot freeze during periods of frost.

The spray tube is horse-proof and cannot become clogged.

- No dust
- Stable riding surface
- Reliable

Q-LINE

Features

- The basic irrigation is suitable for the basic and the basic XL mill.
- The system will be located in the middle under the engine, so there must be a free passage in the middle
- For other brands, you may have to adjust something to get it right.

Specifications

Suited for	Q-Line walkers Basic / Basic XL
Connection	1/2" inner thread
Required liters	150 l/h
Required working pressure	2 bar
Fixings	Included
Included	Pipes on the arm
Manual Valve	Drain valve
