Vitafloor® Stable Unit: The Revolutionary Choice in Horse Well-being

Maximum Freedom and Safety for Horses

The Vitafloor® stable unit is our most popular model because it allows horses to move and relax freely. This design eliminates the need for constant supervision, enabling horses to remain in their natural state of rest while enjoying the therapy.

Recommended Use for Optimal Freedom of Movement

It's ideal for horses to move freely on the Vitafloor®. Therefore, we recommend building walls around the product, eliminating the need to restrain the horse. Using the Vitafloor® stable unit is no riskier than having the horse in its own stall. This model optionally includes a lifting function that intermittently raises one side of the floor, leading to increased muscle stimulation.

30% More Muscle Development with Lifting Function

Internal research has shown that, in particular, the lifting function increases the development of the muscular system by 30% compared to a vibration floor without this function. This highlights the effectiveness of Vitafloor® in strengthening a horse's muscles.

User-Friendly and Part of Daily Training

The Vitafloor® is designed for ease of use and quickly becomes a regular part of daily training routines. The floor can be installed in an existing or new stable, with sizes ranging from 1.8x3 to 3.5x3 meters, and custom sizes are also available.

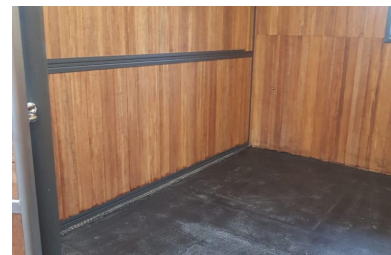

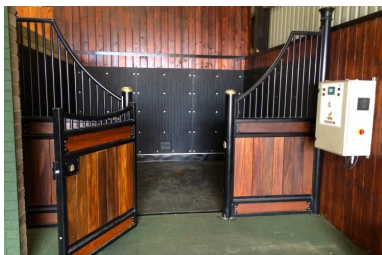

Satisfied Users and Efficient Treatment

All users of Vitafloor® report high satisfaction with the results achieved. One Vitafloor® unit can easily treat 15-20 horses per day. The process is simple: place the horse on the Vitafloor®, start the program, and remove the horse once the program is completed. Most horses quickly become accustomed to Vitafloor® (often on the first try), eliminating the need for direct supervision. Additionally, the program automatically shuts off, adding to the ease of use.

Safe, Practical, and Maintenance-Free

The Vitafloor® is not only easy to use but also practically safe and virtually maintenance-free. This makes it an excellent choice for horse owners and trainers seeking an effective and efficient way to improve the health and well-being of their horses.

- ✓ Improved blood flow
- ✓ Faster healing of injuries
- ✓ muscle strength increase
- ✓ Improved bone regeneration

Features

1. **Bone Regeneration:** Scans from the Veterinary University in Davis, California, show that Vitafloor promotes bone regeneration in both the legs and ribs of horses.
2. **Improved Blood Circulation:** Vitafloor enhances blood flow throughout the entire body of the horse.
3. **Tangible Vibrations:** When you place your hands on the horse, you can feel the vibrations up to the shoulders.
4. **Effective Against Osteoporosis and Silicosis:** Vitafloor is the only non-invasive treatment with a documented positive effect on osteoporosis and Silicosis.
5. **Improvement in Bone Density:** Studies indicate an improvement in bone density of up to 20% (based on a human study).
6. **Prevention and Treatment of Colic:** Vitafloor aids in preventing and treating colic in horses.
7. **Treatment for Soft Tissue and Joint Injuries:** Effective in treating soft tissue injuries, painful joints, laminitis, and sesamoid bone conditions.
8. **Faster Healing of Tendon Injuries:** Tendon injuries generally heal in half the normal time with better quality of healed tissue.
9. **Stimulates Hoof Growth:** Promotes healthy and rapid growth of hooves, especially important for horses with hoof problems.
10. **Lowers Cortisol Levels:** Helps in lowering cortisol levels, contributing to the relaxation of the horse.
11. **Energy Consumption and Fat Burning:** Vibration training consumes energy and aids in burning fat.
12. **Increases Testosterone Production:** The training increases testosterone production.
13. **Muscle Growth and Flexibility:** Preliminary veterinary research indicates that Vitafloor contributes to the growth of back muscles and increased muscle flexibility.
14. **Increase in Muscle Strength:** Significant increase in muscle strength after just 10 minutes on the Vitafloor for a period of 10 days.
15. **Improved Performance and Recovery:** Horses trained on the Vitafloor can accelerate faster from a standstill and show improved quality of gaits, elasticity, and flexibility. Additionally, Vitafloor accelerates the regeneration process after heavy exertion.

“"VDL stud farm is responsible for more than 50 breeding stallions worldwide. Since 1972 our warmbloods and their offspring have been put to the test at the highest levels, and our horses have been taking part in the Olympics since 1996. In addition, our stallions are being successfully used by other studbooks. In our continued quest to improve our quality, we started using a Vitafloor in the beginning of 2022 in our European certified breeding station in Bears, The Netherlands. Our company slogan is “Quality wins the battle” and the use of the Vitafloor fits within this very well”.”

— VDL Stud - Quality Always Wins

“VERY SATISFIED WITH THE SERVICE "We have been using the Vitafloor for years. After using it, we notice a clear difference in our horses; they feel very relaxed both mentally and physically. We are also very satisfied with the service that Vitafloor provides us!"”

— Sjef Janssen | Anky Education Center | Bondscoach dressuurteam België

““I had the privilege of using a Vitafloor while stabled in Belgium in preparation for the 2014 World Equestrian Games. I was hesitant about my horse being nervous but he very quickly accepted the sessions and was soon leading himself onto the floor! Vitafloor helps keep my horses comfortable in ways that I can’t. The vibration penetrates much deeper than any icing technology or massage and treats the whole body in every session. In addition to the physical benefits, the horses love it!””

— Laura Graves, American Dressage athlete.

“"Competition horses in top form" "The Vitafloor is a valuable addition to our competition horses, it really helps to keep them in top shape, clean and healthy!"”

— Steffen Peters S. Peters Dressage, San Diego CA, USA

Specifications

Width	1800 mm
Length	3000 mm
Height	125 mm
Weight	280 Kg
Colour	Black
Drive system	1 motor
Included	Controlbox with timer
Other	Solid setup
Power supply	230V 50Hz
Fuse with	1
Basic material	Wood / Rubber
Fixings	Included
Speed	Adjustable
Time	Adjustable
Ampere	16A
Power cord	230V + RA
IP rating	IP 65
Quality mark	CE
Transport size	680 Kg
Transport weight	3600 x800 x 2000 mm
