Vitafloor offers a bracket system with the innovative safety locking bar system for the VME. These brackets are made from high-quality aluminum and feature smooth, extremely durable couplings. The Vitafloor safety locking bar system is integrated on both sides of the brackets. Developed by a team of expert engineers and horse enthusiasts, this system prevents horses from getting stuck on the bar during emergencies. Thanks to the clever catch and release mechanism, the bar can quickly disengage, ensuring the horse doesn't remain trapped. Not only is this system incredibly sturdy, but it's also extremely safe. The unique safety locking bar system is exclusively available from Vitafloor.

This bracket system can be purchased along with the Vitafloor VME vibration plate or separately. The brackets are not directly attached to the vibration plate; instead, they are mounted underneath it using two robust steel mounting plates. The brackets are supplied in individual parts that are easy to assemble. They come with our proven safety locking bar system at both the front and back, resulting in a stable, secure, and user-friendly system that provides ultimate peace of mind.
